Matthew Wilber

Skills

Languages	Python ▪ Java ▪ Scala ▪ R
ML/Data Science	Pytorch ▪ Jupyter ▪ sklearn ▪ numpy ▪ scipy ▪ matplotlib ▪ ggplot ▪ Shiny ▪ tidyr
Devops/Infra	Kubernetes ▪ Docker ▪ AWS ▪ Jenkins ▪ Terraform ▪ Ansible ▪ Packer
App Dev	Flask ▪ React ▪ NodeJS

Work Experience

Roam Analytics — **ML Platform Engineering Lead**.
2018-Present
Built autoscaling, GPU-enabled Kubernetes cluster on Amazon EKS, using custom AMIs for healthcare-grade security ▪ Trained, deployed, and served hundreds of containerized machine learning models and workloads ▪ Generated massive healthcare knowledge graph (billions of edges) using Airflow ▪ Built NLP-powered medical text search and annotation applications backed by a healthcare knowledge graph on a React/Flask/Elasticsearch stack ▪ Wrote infrastructure as code on AWS using Terraform, Ansible and Packer ▪ Implemented continuous integration and deployment pipelines on Jenkins, using tools including pylint, mypy, Docker, and Ansible

Wealthfront — **Senior Data Engineer**.
2016-2018
Wrote 30+ Spark pipelines for big data processing ▪ Sped up batch event writes to database by 2x compared to the Hibernate ORM ▪ Implemented Spark cluster autoscaling + optimized parittioning, reducing daily runtime of all batch jobs from 24+ hours to 15 hours ▪ Reduced complexity of managing and debugging our job-dependency graph by over twofold, by sorting dependency graph with a topological sort and removing redundant dependencies. ▪ Built low-latency key-value store based on RocksDB ▪ Wrote automated data quality checks and real-time monitoring of compute clusters

Yelp — **Search Quality Intern**.
Summer 2015
Improved search results for misspelled queries, by adding Kneser-Ney smoothing to the language models underlying Bayesian query categorization

Citadel — **Software Intern**.
Summer 2014
Developed and deployed statistical model of trade-execution latency in C++ and R

UCLA — **Applied Mathematics Research**.
Summer 2013
Time series modeling of crime data with stochastic differential equations

Education

Cornell University — **Master of Engineering**, *Computer Science*, *GPA 4.0*.
2020-2021
Deep Probabilistic and Generative Models; Large Scale Machine Learning; Reinforcement Learning, Natural Language Processing; Computational Linguistics II; Networks and Markets; Game Theory; Behavior and Information Technology

Harvey Mudd College — **Bachelor of Science**, *Mathematics*, *GPA 3.7*.
2012–2016
Intro to CS; Principles of Computer Science; Data Structures and Program Development; Algorithms, Computational Biology; Bayesian Statistics; Time Series; Statistical Linear Models; Abstract Algebra; Partial Differential Equations; Intermediate Linear Algebra; Algebraic Geometry

Other Skills

Languages	English - Native ▪ Japanese - Intermediate
